		<u> </u>			
8. Provide for privacy. 9. Arrange items on your work area.					

10. Raise the bed to a comfortable working height. Follow the care plan for bed rail use.*			
Procedure	S	U	Comments
11. Lower the bed rail near you, if it is up.			
12. Help the client to a comfortable			
position.			
13. Cover the client with a bath blanket or			
clean sheet. Fan-fold the client's top linen			
to the foot of the bed.			
14. Expose the affected body part, leaving			
the rest of the client as covered as			
possible.			
15. Make a cuff on the plastic bag. Place it			
within reach and in a place that avoids			
crossing over the wound with soiled wipes.			
16. Wear a gown and mask if necessary as			
directed by the care plan.			
17. Put on gloves.			
18. Remove tape by holding the skin down			
and gently pulling the tape toward the			
wound. Avoid lifting the tape to remove it,			
but rather peel away the tape closely to			
the client's skin.			
Pulling the tape toward the wound is more			
comfortable for the client than pulling			
away from it, as is peeling it closely to the			
client's skin. These steps can also reduce			
the chance of reopening the wound if it has			
not yet healed.			
19. Remove adhesive from the skin. Wet a			
10×10 cm (4 × 4 in.) gauze dressing with			
the adhesive remover. Clean <i>away</i> from			
the wound.			
20. Remove the gauze dressing. Start with			
the top dressing. Keep the soiled side of			
the dressing out of the client's sight.			
21. Place the dressing in the leak-proof			
bag. It must not touch the outside of the			
bag.			
22. Remove the dressing directly over the			
wound very gently.			

22 Observe the wound and drainage (ass			
23. Observe the wound and drainage (see			
Box 22.5 on page 497). Avoid showing the			
drainage to the client.			
24. Remove gloves. Put them in the bag.			
Practise proper hand hygiene. (If used,			
raise the bed rail before leaving the			
bedside. Lower it when you return.)			
25. Open the dressing tray. Unfold the			
clean or sterile wrapper and ensure it stay			
opens.			
26. Pour the normal saline into the			
dressing tray, being careful not to splash it			
on the wrapper.			
27. Open the small gauze square package			
and, using the forceps supplied in the			
dressing tray, place five or six squares onto			
the dressing tray or on the clean wrapper,			
staying as close to the centre of the			
wrapper and the tray as possible.			
28. Cut the length of tape needed.			
29. Put on clean gloves			
30. Using either the forceps supplied in the			
dressing tray or your clean, gloved hand,			
pick up a small gauze square. Dip it into			
the normal saline solution.			
31. Wipe the wound in one long stroke			
down the middle of the wound from top to			
bottom. Discard the gauze square into the			
leak-proof bag. If you are using a cleaning			
cloth, use a fresh corner for each stroke			
you use. Do not touch the wound again			
with a soiled gauze square or cleaning			
cloth.			
32. Wipe down the middle of the wound			
again and then on either side of the			
wound.			
33. Apply dressing, as directed by the care			
plan			
34. Secure the dressing in place. Use tape.			
35. Remove your gloves. Put them in the			
bag. Practise proper hand hygiene.			
			·
Post-Procedure	S	U	Comments

36. Provide for safety and comfort.		
37. Cover the client and remove the bath		
blanket or clean sheet.		
38. Place the call bell within reach.*		
39. Return the bed to its lowest position.		
Follow the care plan for bed rail use.*		
40. Remove privacy measures.		
41. Discard supplies into a leak-proof bag.		
Tie the bag closed. Dispose of the bag,		
according to employer policy.		
42. Clean your work surface, according to		
employer policy.		
43. Practise proper hand hygiene.		
Report and Record your actions and		
observations, according to employer		
policy.
