6. Place the waterproof pad under the
body part to be treated.
7. Fill the basin one-half to two-thirds full
with hot water, as directed by your
supervisor. Measure the water
temperature.
8. Place the compress in the water.
9. Wring out the compress.
10. Apply the compress to the area. Note the time.
11. Ask the client if the compress feels comfortable. If the client is comfortable,
cover the compress quickly with plastic wrap. Cover the plastic wrap with a bath
towel (FIGURE 40.2). Secure the towel in
place with ties, tape, or rolled gauze.
12. Place the call bell within reach. Follow

			Ţ
the care plan for bed rail use.*			
13. Check the area every 5 minutes. The			
compress should never be applied longer			
than 15 minutes. Check for redness and			
complaints of pain, discomfort, or			
numbness. Remove the compress if any of			
these signs occur, and tell your supervisor			
immediately.			
14. Change the compress if it cools down.			
15. Remove the compress after 15 minutes			
or sooner, as directed by your supervisor.			
Pat the area dry with a towel.
